DIEZ AI Literacy Programme 2026

AI for Data Stewards

Session briefs

Supplement to the Programme Summary submitted by Wellington Education (RFP DIEZ/PRAD/RFP/037-26).
Specialist AI faculty content prepared by Softengi for Wellington Education.
Status: Draft v0.1 for faculty review · September 2026

1. About these briefs

These briefs describe each session of the four-day programme: what participants do, which DIEZ initiative it draws on, what they produce and which outcome it evidences. They follow the day themes, working disciplines and evidence artefacts of the submitted Programme Summary and do not change them.

How to read them:

- Session IDs run D1.S1 to D4.S6. Durations are net contact time; clock times and breaks are set with DIEZ HR.
- Participants work in teams formed by function across the three zones, so that the same process can be compared across DAFZ, DSO and Dubai CommerCity.
- “The approved assistant” is DIEZ's Microsoft 365 Copilot, used with simulated data only. It is DIEZ's approved environment, not the subject of the training.
- No input block runs longer than 20 minutes; every session ends with an artefact for the participant's evidence portfolio.
- Output names match the participant toolkit in the Programme Summary.
- Key terms in each brief feed the bilingual glossary for Arabic co-facilitation.
- References such as G1–G8 point to the assumptions on DIEZ's data-governance and AI-governance frameworks in Appendix D. Those frameworks have not yet been shared.

2. Outcomes referenced in the briefs

DIEZ Digital described six outcomes for data stewards on 25 September 2026. They map onto the learning outcomes of the Programme Summary and are the basis for the baseline and post-assessment items.

ID	After the programme, participants can…
O1	Know which AI governance practices come with a product they are asked to sign off.
O2	Tell a responsible AI product or output from one that is not: privacy, security, bias, human oversight, verification.
O3	Triage a use case: safe to adopt; adopt only with a human in the loop; not solvable by AI yet.
O4	Explain how the quality of the data they own drives the quality of AI built on it.
O5	Understand DIEZ's seven live AI initiatives and frame new use cases from their own pain points.
O6	Know the danger of putting sensitive data into non-approved AI tools, and act accordingly.

3. The four days at a glance

ID	Session	Min	Lead	Output
Day 1 — Understand and Identify				
D1.S1	Welcome, baseline read-out and learning contract	30	Softengi, with Wellington	Personal success criteria; learning contract; evidence portfolio opened.
D1.S2	AI through DIEZ's own seven initiatives	60	Softengi	DIEZ AI initiative map.
D1.S3	Safe use: approved tools, authorised data, what never to share	45	Softengi	Safe-use decision guide (draft; finalised in D3.S5 as the AI Safe Use Checklist).
D1.S4	Demonstration: from context to verified output	45	Softengi	Output verification checklist (first use); observation notes.
D1.S5	Lab: context and instruction on a stewardship task	75	Softengi	AI working and prompt canvas; tested prompt pattern; draft data-dictionary entry.
D1.S6	Opportunity clinic: safe to adopt, human in the loop, or not yet	60	Softengi	AI Opportunity Map with triage column.
Day 2 — Apply to DIEZ Initiatives				
D2.S1	Recap and challenge: a plausible but unsupported output	20	Softengi	Corrected output note.
D2.S2	Garbage in, garbage out: data readiness for the products you own	60	Softengi	AI and Data Readiness Checklist, completed for the participant's own dataset.
D2.S3	Lab A: Customer Segmentation	60	Softengi	Segment review and data-readiness notes (feed the AI and Data Readiness Checklist).
D2.S4	Lab B: Customer Care — Sentiment Analysis and Churn Prediction	75	Softengi	Sentiment validation log; churn intervention control (decision rules and evidence).
D2.S5	Lab C: Document Intelligence and Partner IQ	75	Softengi	Extraction QA record and exception workflow; matching-criteria review.
D2.S6	Use-case prioritisation for the capstone	45	Softengi	Prioritised DIEZ use case.
Day 3 — Verify and Govern				
D3.S1	Recap: what makes an output trustworthy?	20	Softengi	Peer-review record.
D3.S2	Responsible AI inside DIEZ's frameworks	60	Softengi	Risk prompt card.
D3.S3	Sign-off simulation: Digital asks you to sign off this product	75	Softengi	Initiative risk review; sign-off checklist.
D3.S4	Lab: Content Moderation	60	Softengi	Content-moderation risk review; escalation path.
D3.S5	Copilot control patterns	45	Softengi	AI Safe Use Checklist.
D3.S6	Human review, decision rights and escalation	60	Softengi	Human review workflow and escalation map; governed workflow outline.
Day 4 — Implement and Demonstrate				
D4.S1	Capstone briefing and assessment criteria	30	Softengi and CMI	Capstone plan.
D4.S2	Workflow design studio	90	Softengi	Draft governed workflow.
D4.S3	Implementation, adoption and change	Set by CMI	CMI (via Wellington)	Implementation canvas (suggested).
D4.S4	Peer review and refinement	60	Softengi and CMI	Peer feedback record.
D4.S5	Capstone demonstrations	45	Softengi and CMI (panel)	Assessed capstone.

ID	Session	Min	Lead	Output
D4.S6	Post-assessment, CMI evidence and 30-day application plan	Set by CMI	Wellington and CMI	Post-assessment; CMI evidence portfolio; 30-day application plan.

Shaded rows: CMI content, to be completed by Wellington and CMI.

4. Day 1 — Understand and Identify

Day purpose: Build a shared, plain-language model of AI through DIEZ's own initiatives, set the rules for safe use, and select worthwhile opportunities.

Day evidence: DIEZ AI initiative map, AI Opportunity Map, tested working pattern.

D1.S1 · Welcome, baseline read-out and learning contract

Duration · lead · format	30 min · Softengi, with Wellington · Plenary
Purpose	Connect the programme to what participants said in the baseline diagnostic and agree the rules for working with AI during the four days.
DIEZ anchor	Baseline diagnostic; the three free zones and the functions represented in the room.
What participants do	1. Hear the cohort's baseline themes: confidence, current AI use, main concerns. 2. Form function teams across zones, for example licensing heads from DAFZ, DSO and Dubai CommerCity together. 3. Agree the working rules: approved assistant only, simulated data only, verify before use. 4. Write personal success criteria for the four days.
Materials	Baseline summary (Wellington); team list.
Output	Personal success criteria; learning contract; evidence portfolio opened.
Outcomes	Baseline for O1–O6
Responsible-AI checkpoint	Working rules for the whole programme.
Key terms (glossary)	baseline, evidence portfolio, data owner, data steward
Needs from DIEZ	Participant list with zone, function and product owned; baseline results.

D1.S2 · AI through DIEZ's own seven initiatives

Duration · lead · format	60 min · Softengi · 20 min input, 40 min team mapping
Purpose	Build a plain-language understanding of what AI does by looking at the seven initiatives DIEZ already runs, not at vendors or products.
DIEZ anchor	All seven initiatives, grouped by capability: grouping (Customer Segmentation), classifying (Sentiment Analysis, Content Moderation), predicting (Customer Churn Prediction), matching (Partner IQ), extracting (Document Intelligence), generating (Copilot).
What participants do	1. Short input: what each capability does, where it is strong, where it fails; predictive versus generative AI. 2. Each team takes the initiatives closest to its function and completes one map row: business purpose, data used, business owner, what a wrong output would look like, who would notice. 3. Gallery walk: teams add to each other's rows.
Materials	One card per initiative, based on DIEZ's own descriptions; screenshots where provided.
Output	DIEZ AI initiative map.
Outcomes	O5, O2
Responsible-AI checkpoint	Every row names who is accountable for the output.
Key terms (glossary)	model, prediction, probability, classification, confidence, hallucination
Needs from DIEZ	Business owner of each initiative; screenshots or user-guide pages.

D1.S3 · Safe use: approved tools, authorised data, what never to share

Duration · lead · format	45 min · Softengi · 10 min input, 35 min scenario cards and discussion
Purpose	Every participant leaves able to decide, in the moment, whether a piece of work may go into an AI tool, and which tool.
DIEZ anchor	DIEZ's approved assistant; customer, tenant and application data from leasing, licensing and government services.
What participants do	1. In function teams, sort 12 scenario cards (for example, a colleague pastes a tenant list into a public chatbot to clean it) into allowed, allowed with conditions and not allowed. 2. Name the rule behind each decision and whom to ask when unsure. 3. Draft the first version of the team's safe-use decision guide.
Materials	Scenario cards; DIEZ acceptable-use guidance when provided (see G5). No AI tool.
Output	Safe-use decision guide (draft; finalised in D3.S5 as the AI Safe Use Checklist).
Outcomes	O6, O2
Responsible-AI checkpoint	Approved environment, authorised data, data classification.
Key terms (glossary)	approved tool, sensitive data, classification, authorised use
Needs from DIEZ	AI acceptable-use guidance; data classification levels (G2, G5).

D1.S4 · Demonstration: from context to verified output

Duration · lead · format	45 min · Softengi · 25 min live demonstration, 20 min catch-the-error
Purpose	Model the working discipline CONTEXT → INSTRUCT → REVIEW → VERIFY → DECIDE → DOCUMENT → ACT OR ESCALATE on a realistic DIEZ task.
DIEZ anchor	Copilot initiative; a simulated government-services policy document and a customer enquiry.
What participants do	1. Watch the facilitator use DIEZ's approved assistant to summarise the policy and draft a reply to the enquiry. 2. Spot the planted problems: an unsupported statement, a missing condition, an invented deadline. 3. Check each claim against the source, decide accept, improve, reject or escalate, and record why.
Materials	Simulated policy document and enquiry; Microsoft 365 Copilot in Word.
Output	Output verification checklist (first use); observation notes.
Outcomes	O2
Responsible-AI checkpoint	Source checking; the sender stays accountable for what is sent.
Key terms (glossary)	source, verification, unsupported statement, accept / improve / reject / escalate
Needs from DIEZ	None; fully simulated. A DIEZ reply template would add realism.

D1.S5 · Lab: context and instruction on a stewardship task

Duration · lead · format	75 min · Softengi · 10 min briefing, 55 min lab, 10 min debrief
Purpose	Practise giving an assistant enough context to produce useful stewardship work, and see how weak instructions produce weak outputs.
DIEZ anchor	Customer Segmentation background: departments defined a key customer differently (by revenue, by multinational status, by size). Customer growth and leasing.
What participants do	1. Give the assistant three conflicting departmental definitions and ask for one definition, first with a weak instruction, then with a structured one (context, purpose, constraints, format). 2. Compare the two outputs and note what changed and why. 3. Draft a data-dictionary entry in Word: definition, owner, source, valid values, quality rule. 4. Save the instruction that worked as the team's tested prompt pattern.
Materials	Three simulated departmental definitions; data-dictionary template; Microsoft 365 Copilot in Word.
Output	AI working and prompt canvas; tested prompt pattern; draft data-dictionary entry.
Outcomes	O4, O5
Responsible-AI checkpoint	The data owner, not the assistant, decides the definition.
Key terms (glossary)	context, instruction, definition, data dictionary, valid values
Needs from DIEZ	DIEZ data-dictionary or metadata template, if one exists.

D1.S6 · Opportunity clinic: safe to adopt, human in the loop, or not yet

Duration · lead · format	60 min · Softengi · Clinic in function teams
Purpose	Turn each participant's own recurring task into an AI opportunity and sort it honestly.
DIEZ anchor	Participants' own pain points from the baseline, across leasing, licensing, government services, customer care and compliance.
What participants do	1. Each participant names one recurring task that costs time or causes errors. 2. The team rates each task for value, data readiness and risk. 3. Sort each into three groups: safe to adopt with the approved assistant; adopt only with a human in the loop; not solvable by AI yet, and why. 4. Each participant picks one opportunity to carry through the programme.
Materials	AI Opportunity Map template; triage cards.
Output	AI Opportunity Map with triage column.
Outcomes	O3, O5
Responsible-AI checkpoint	Triage criteria: impact on a customer, legal effect, sensitive data, ability to verify the output.
Key terms (glossary)	use case, pain point, human in the loop, feasibility
Needs from DIEZ	None.

5. Day 2 — Apply to DIEZ Initiatives

Day purpose: Practise AI-assisted stewardship work and assess data readiness on DIEZ's initiatives.

Day evidence: AI and Data Readiness Checklist, reviewed stewardship artefacts, prioritised DIEZ use case.

D2.S1 · Recap and challenge: a plausible but unsupported output

Duration · lead · format	20 min · Softengi · Team challenge
Purpose	Re-activate the verification habit from Day 1.
DIEZ anchor	A customer-feedback summary that sounds right but is not supported by the tickets behind it.
What participants do	1. Each team receives the summary and the source tickets. 2. Find the unsupported statement and correct it with evidence.
Materials	Prepared summary and source extract.
Output	Corrected output note.
Outcomes	O2
Responsible-AI checkpoint	Plausibility is not evidence.
Key terms (glossary)	evidence, trend, claim
Needs from DIEZ	None.

D2.S2 · Garbage in, garbage out: data readiness for the products you own

Duration · lead · format	60 min · Softengi · 20 min input, 40 min self-assessment
Purpose	Show how the quality of the data a steward owns sets the ceiling for any AI initiative built on it.
DIEZ anchor	Participants' own datasets and products, for example lease records, licensing dashboards, service requests.
What participants do	1. Input: the readiness dimensions (documented, governed, accessible, complete, consistent across zones, current, representative), each shown through how the defect would appear in a DIEZ initiative. 2. Each participant assesses one dataset they own against the checklist. 3. Teams compare results: where do the same functions in different zones define or record data differently?
Materials	AI and Data Readiness Checklist.
Output	AI and Data Readiness Checklist, completed for the participant's own dataset.
Outcomes	O4
Responsible-AI checkpoint	Classification and access are checked before any data use.
Key terms (glossary)	completeness, consistency, timeliness, representativeness, data owner, data custodian
Needs from DIEZ	DIEZ data-quality dimensions and role definitions (G1, G3).

D2.S3 · Lab A: Customer Segmentation

Duration · lead · format	60 min · Softengi · 15 min briefing, 45 min lab
Purpose	Show how the quality and definitions of customer data decide whether a segment tier can be trusted.
DIEZ anchor	Customer Segmentation (tiers as shown on the customer record); customer growth and leasing.
What participants do	1. Use DIEZ's approved assistant in Excel to profile a simulated list of 300 companies across the three zones: missing drivers, duplicates across zones, stale records. 2. Compare three departmental definitions of a key customer and agree one definition as data owners. 3. Explain two tier assignments to a colleague and decide which one needs a human check before it is used in a customer decision. 4. Record the data-quality rules the team would ask Digital to enforce.
Materials	Simulated customer list (no financial values); Microsoft 365 Copilot in Excel; screenshot of the tier view when provided.
Output	Segment review and data-readiness notes (feed the AI and Data Readiness Checklist).
Outcomes	O4, O5
Responsible-AI checkpoint	Historical bias and representation; appropriate use of a tier.
Key terms (glossary)	segment, tier, driver, completeness, duplicate
Needs from DIEZ	Segment naming; tier-view screenshot; confirmation of which fields may be simulated.

D2.S4 · Lab B: Customer Care — Sentiment Analysis and Churn Prediction

Duration · lead · format	75 min · Softengi · 10 min briefing, 55 min lab, 10 min debrief
Purpose	Work with two model outputs that Customer Care relies on and decide where human review is needed.
DIEZ anchor	Sentiment Analysis (positive, neutral or negative with a confidence score on enquiries and complaints) and Customer Churn Prediction (alerts on customers likely to leave, aimed at least three months ahead to allow a leadership visit or retention action). Customer growth.
What participants do	1. Sentiment: label 20 simulated Arabic and English tickets yourselves, compare with the model labels and confidence scores, and set the confidence level below which a person must review. 2. Churn: for each customer on a simulated alert list with lease history, decide on a leadership visit, a retention action, monitoring or no action, and record the reason. 3. Find the customer flagged only because of a data error. 4. Draft a leadership-visit brief in Word with the approved assistant, then verify it against the evidence.
Materials	Simulated tickets and alert list; Microsoft 365 Copilot in Excel and Word.
Output	Sentiment validation log; churn intervention control (decision rules and evidence).
Outcomes	O2, O3, O4
Responsible-AI checkpoint	A probability is not a certainty; no customer action without a human decision; fairness across segments.
Key terms (glossary)	confidence score, threshold, false positive, probability, intervention
Needs from DIEZ	Ticket categories; format of sentiment output and churn alert (screenshots).

D2.S5 · Lab C: Document Intelligence and Partner IQ

Duration · lead · format	75 min · Softengi · 10 min briefing, 55 min lab, 10 min debrief
Purpose	Check extracted data before it reaches another entity's system, and question how a matching engine ranks companies.
DIEZ anchor	Document Intelligence (fields extracted from submitted documents, for example for visa service requests, and passed to another government entity's portal) and Partner IQ (recommending partner companies within the same free zone). Government services, compliance.
What participants do	1. Compare extracted fields with simulated application forms and log misread fields, missing pages and name mismatches. 2. Write the stop-and-check rules: which fields or cases always go to a person. Compliance variant: which document checks must stay human for anti-money-laundering purposes. 3. Partner IQ: review a ranked list of recommended partners, explain why one ranks above another, and look for a bias towards large or well-documented companies. 4. List the company-profile fields that make matching fair.
Materials	Simulated forms, extraction table and match results; Microsoft 365 Copilot in Excel.
Output	Extraction QA record and exception workflow; matching-criteria review.
Outcomes	O4, O2
Responsible-AI checkpoint	Evidence retention for extracted data; explainable rankings; fair treatment of member companies.
Key terms (glossary)	extraction, field, exception, ranking, matching criteria
Needs from DIEZ	Document types in scope; current exception handling; Partner IQ matching criteria as far as known.

D2.S6 · Use-case prioritisation for the capstone

Duration · lead · format	45 min · Softengi · Team decision workshop
Purpose	Choose the use case each team will carry into the capstone.
DIEZ anchor	All seven initiatives plus the opportunities from D1.S6.
What participants do	1. Compare candidates on purpose, data readiness, risk and value. 2. Select one: an improvement to an existing initiative in the team's function, or a new use case. 3. Record why it was chosen and what data it needs.
Materials	Initiative map, Opportunity Map, readiness checklists from Days 1–2.
Output	Prioritised DIEZ use case.
Outcomes	O5, O3
Responsible-AI checkpoint	Risk is weighed alongside value, not after it.
Key terms (glossary)	prioritisation, value, readiness, risk
Needs from DIEZ	None.

6. Day 3 — Verify and Govern

Day purpose: Make responsible-AI controls explicit inside DIEZ's own frameworks and prepare stewards for the sign-off of AI products.

Day evidence: AI Safe Use Checklist, initiative risk review, human review workflow and escalation map.

D3.S1 · Recap: what makes an output trustworthy?

Duration · lead · format	20 min · Softengi · Peer review
Purpose	Review Day 2 artefacts against evidence and acceptance criteria.
DIEZ anchor	Day 2 lab artefacts.
What participants do	1. Teams swap one Day 2 artefact. 2. Each team checks the other's evidence and acceptance decision and notes one improvement.
Materials	Day 2 artefacts; output verification checklist.
Output	Peer-review record.
Outcomes	O2
Responsible-AI checkpoint	Acceptance criteria are stated before an output is used.
Key terms (glossary)	acceptance criteria, peer review
Needs from DIEZ	None.

D3.S2 · Responsible AI inside DIEZ's frameworks

Duration · lead · format	60 min · Softengi · 2 × 20 min input, 20 min case
Purpose	Connect the risks participants have already met to DIEZ's own rules for data and AI.
DIEZ anchor	DIEZ data-governance and AI-governance frameworks (see Appendix D, G1–G8).
What participants do	1. Input 1: privacy and confidentiality, security, bias, explainability, intellectual property, over-reliance, evidence retention, each shown through a DIEZ initiative. 2. Input 2: how DIEZ's frameworks assign responsibility to data owners, stewards, custodians, Digital and approvers. 3. Case: a draft reply containing another customer's details is sent. Teams trace which rule applied, who should have caught it and what evidence exists.
Materials	DIEZ framework extracts, or the placeholders in Appendix D; risk prompt card.
Output	Risk prompt card.
Outcomes	O2, O1
Responsible-AI checkpoint	Core session for responsible AI.
Key terms (glossary)	accountability, explainability, bias, over-reliance, incident
Needs from DIEZ	Framework extracts (G1–G8).

D3.S3 · Sign-off simulation: Digital asks you to sign off this product

Duration · lead · format	75 min · Softengi · Role play in function teams
Purpose	Prepare data stewards for the moment Digital asks them to sign off an AI-enabled product they will then own.
DIEZ anchor	DIEZ's model: Digital builds and maintains; the business owner signs off and owns. Example release: a new version of Customer Churn Prediction or Document Intelligence.
What participants do	1. Each team receives a release pack: purpose, data used, test results, known limitations, human-review steps. 2. Using a sign-off checklist, the team questions the Digital team (played by a facilitator): what was tested, on what data, what error rate is acceptable, who reviews exceptions, how it will be monitored. 3. Decide: sign off, sign off with conditions, or not yet, and record why. 4. Compare decisions across teams.
Materials	Simulated release packs; sign-off checklist (see G6).
Output	Initiative risk review; sign-off checklist.
Outcomes	O1, O3
Responsible-AI checkpoint	No sign-off without evidence of testing, human review and monitoring.
Key terms (glossary)	sign-off, release, acceptance criteria, error rate, monitoring
Needs from DIEZ	DIEZ's product approval or release procedure, if documented (G6).

D3.S4 · Lab: Content Moderation

Duration · lead · format	60 min · Softengi · 10 min briefing, 45 min lab, 5 min debrief
Purpose	Translate a community policy into moderation decisions and see where automatic screening needs a human.
DIEZ anchor	Content Moderation of posts in the Dubai CommerCity community app; compliance.
What participants do	1. Turn a policy excerpt into clear moderation rules. 2. Review borderline posts that screening allowed or blocked and find false positives and false negatives. 3. Set how confident screening must be before a post is blocked without review. 4. Design the escalation path for sensitive cases.
Materials	Simulated posts (text only) and policy excerpt.
Output	Content-moderation risk review; escalation path.
Outcomes	O2, O1
Responsible-AI checkpoint	Consistent treatment of members; sensitive content; escalation and appeal.
Key terms (glossary)	policy, threshold, false positive, false negative, escalation
Needs from DIEZ	Community-app policy excerpt.

D3.S5 · Copilot control patterns

Duration · lead · format	45 min · Softengi · Short lab in Outlook and Word
Purpose	Settle the everyday rules for using DIEZ's approved assistant safely.
DIEZ anchor	Copilot initiative; authorised data; what the assistant can see in a user's documents and mail.
What participants do	1. Work through four situations: summarising a mail thread that contains another department's confidential data; drafting from a document of unknown status; an answer with no source; a task that should not be delegated. 2. Agree for each: allowed, allowed with conditions, not allowed. 3. Finalise the team's safe-use decision guide from D1.S3 as the AI Safe Use Checklist.
Materials	Simulated mail and documents; Microsoft 365 Copilot in Outlook and Word.
Output	AI Safe Use Checklist.
Outcomes	O6, O2
Responsible-AI checkpoint	Authorised data, oversharing, source checking, accountability.
Key terms (glossary)	authorised data, oversharing, confidentiality, accountability
Needs from DIEZ	Acceptable-use rules; sensitivity labels in use, if any (G2, G5).

D3.S6 · Human review, decision rights and escalation

Duration · lead · format	60 min · Softengi · Workshop with cross-team challenge
Purpose	Design who checks what in the capstone workflow and stress-test it.
DIEZ anchor	Each team's prioritised use case from D2.S6.
What participants do	1. Map the decision points in the workflow and who owns each. 2. Define when work stops and escalates, and what evidence is kept. 3. Another team challenges the design with risk and monitoring questions.
Materials	Human-oversight template; decision and escalation framework.
Output	Human review workflow and escalation map; governed workflow outline.
Outcomes	O1, O3
Responsible-AI checkpoint	Named decision rights at every step.
Key terms (glossary)	decision rights, escalation, evidence, monitoring
Needs from DIEZ	DIEZ escalation routes (G7).

7. Day 4 — Implement and Demonstrate

Day purpose: Integrate the learning into a governed workflow, demonstrate it, and plan workplace application.

Day evidence: Governed AI-assisted workflow, capstone assessment, post-assessment, CMI evidence portfolio, 30-day application plan.

Proposed split: CMI, through Wellington and Dr. Sayeed, leads the management, adoption and CMI-evidence sessions; Softengi coaches the capstone. The CMI sessions below are placeholders for Wellington and CMI to complete.

D4.S1 · Capstone briefing and assessment criteria

Duration · lead · format	30 min · Softengi and CMI · Plenary
Purpose	Set the capstone task, rubric and presentation format.
DIEZ anchor	Each team's governed workflow outline from D3.S6.
What participants do	1. Review the rubric and evidence expectations. 2. Agree the peer-review protocol and presentation format.
Materials	Capstone template; rubric.
Output	Capstone plan.
Outcomes	—
Responsible-AI checkpoint	Responsible controls carry the largest weight in the rubric.
Key terms (glossary)	capstone, rubric
Needs from DIEZ	DIEZ reviewers for D4.S5, if any.

D4.S2 · Workflow design studio

Duration · lead · format	90 min · Softengi · Coached team work
Purpose	Build the end-to-end governed workflow: INPUT → AI ASSISTANCE → HUMAN REVIEW → DECISION → EVIDENCE → ACTION → MONITORING.
DIEZ anchor	The team's use case, business line and initiative.
What participants do	1. Assemble the workflow from the Day 1–3 artefacts. 2. State for each step what AI assists with and what stays human-owned. 3. Draft the presentation in PowerPoint with the approved assistant from the team's own artefacts, then verify every slide against them.
Materials	Days 1–3 artefacts; Microsoft 365 Copilot in PowerPoint.
Output	Draft governed workflow.
Outcomes	O1, O3, O4
Responsible-AI checkpoint	Every AI step has a named reviewer and evidence rule.
Key terms (glossary)	workflow, human-owned step, evidence rule
Needs from DIEZ	None.

D4.S3 · Implementation, adoption and change

Duration · lead · format	Set by CMI · CMI (via Wellington) · CMI content
Purpose	To be completed by Wellington and CMI from the CMI Leading AI Implementation content.
DIEZ anchor	Suggested interface: uses the draft governed workflow from D4.S2 as input.
Materials	CMI materials.
Output	Implementation canvas (suggested).
Outcomes	CMI evidence

D4.S4 · Peer review and refinement

Duration · lead · format	60 min · Softengi and CMI · Structured peer review
Purpose	Challenge and improve each capstone against shared criteria.
DIEZ anchor	Draft governed workflows.
What participants do	1. Teams review another team's capstone on problem framing, data readiness, controls and value. 2. Each team revises its workflow and presentation.
Materials	Rubric; peer-feedback form.
Output	Peer feedback record.
Outcomes	O1–O4
Responsible-AI checkpoint	Controls reviewed by someone other than the author.
Key terms (glossary)	peer feedback
Needs from DIEZ	None.

D4.S5 · Capstone demonstrations

Duration · lead · format	45 min · Softengi and CMI (panel) · Team presentations
Purpose	Present the governed workflow and explain the responsible-use decisions.
DIEZ anchor	One DIEZ business line per team.
What participants do	1. Each team presents its workflow and answers panel questions. 2. The panel scores against the rubric.
Materials	Team presentations; rubric.
Output	Assessed capstone.
Outcomes	O1–O5
Responsible-AI checkpoint	Decisions and controls are explained, not only the benefit.
Key terms (glossary)	demonstration, assessment
Needs from DIEZ	DIEZ reviewers, if DIEZ wishes to join the panel.

D4.S6 · Post-assessment, CMI evidence and 30-day application plan

Duration · lead · format	Set by CMI · Wellington and CMI · Assessment and planning
Purpose	To be completed by Wellington and CMI. Softengi supplies the scenario-based post-assessment items for outcomes O1–O6.
DIEZ anchor	Baseline diagnostic from D1.S1, for before-and-after comparison.
Materials	WEL.X post-assessment; CMI evidence guide; 30-day plan template.
Output	Post-assessment; CMI evidence portfolio; 30-day application plan.
Outcomes	Measurement of O1–O6

Appendix A. Outcomes to sessions

Where each outcome is built and evidenced. The baseline diagnostic before Day 1 and the post-assessment on Day 4 include at least one scenario item per outcome, so progress can be measured before and after.

Outcome	Sessions where it is built and evidenced
Governance at sign-off **Know which AI governance practices come with a product they are asked to sign off.**	• Day 3: Responsible AI inside DIEZ's frameworks • Day 3: Sign-off simulation: Digital asks you to sign off this product • Day 3: Lab: Content Moderation • Day 3: Human review, decision rights and escalation • Day 4: Workflow design studio • Day 4: Peer review and refinement • Day 4: Capstone demonstrations
Responsible AI judgement **Tell a responsible AI product or output from one that is not: privacy, security, bias, human oversight, verification.**	• Day 1: AI through DIEZ's own seven initiatives • Day 1: Safe use: approved tools, authorised data, what never to share • Day 1: Demonstration: from context to verified output • Day 2: Recap and challenge: a plausible but unsupported output • Day 2: Lab B: Customer Care — Sentiment Analysis and Churn Prediction • Day 2: Lab C: Document Intelligence and Partner IQ • Day 3: Recap: what makes an output trustworthy? • Day 3: Responsible AI inside DIEZ's frameworks • Day 3: Lab: Content Moderation • Day 3: Copilot control patterns • Day 4: Peer review and refinement • Day 4: Capstone demonstrations
Use-case triage **Triage a use case: safe to adopt; adopt only with a human in the loop; not solvable by AI yet.**	• Day 1: Opportunity clinic: safe to adopt, human in the loop, or not yet • Day 2: Lab B: Customer Care — Sentiment Analysis and Churn Prediction • Day 2: Use-case prioritisation for the capstone • Day 3: Sign-off simulation: Digital asks you to sign off this product • Day 3: Human review, decision rights and escalation • Day 4: Workflow design studio • Day 4: Peer review and refinement • Day 4: Capstone demonstrations
Data quality drives AI quality **Explain how the quality of the data they own drives the quality of AI built on it.**	• Day 1: Lab: context and instruction on a stewardship task • Day 2: Garbage in, garbage out: data readiness for the products you own • Day 2: Lab A: Customer Segmentation • Day 2: Lab B: Customer Care — Sentiment Analysis and Churn Prediction • Day 2: Lab C: Document Intelligence and Partner IQ • Day 4: Workflow design studio • Day 4: Peer review and refinement • Day 4: Capstone demonstrations
DIEZ initiatives and new use cases **Understand DIEZ's seven live AI initiatives and frame new use cases from their own pain points.**	• Day 1: AI through DIEZ's own seven initiatives • Day 1: Lab: context and instruction on a stewardship task • Day 1: Opportunity clinic: safe to adopt, human in the loop, or not yet • Day 2: Lab A: Customer Segmentation • Day 2: Use-case prioritisation for the capstone • Day 4: Capstone demonstrations
Safe use of AI tools **Know the danger of putting sensitive data into non-approved AI tools, and act accordingly.**	• Day 1: Welcome, baseline read-out and learning contract (working rules) • Day 1: Safe use: approved tools, authorised data, what never to share • Day 3: Copilot control patterns

Appendix B. DIEZ initiatives to sessions

Initiative	Sessions
Customer Segmentation	• Day 1: AI through DIEZ's own seven initiatives • Day 1: Lab: context and instruction on a stewardship task • Day 2: Lab A: Customer Segmentation
Sentiment Analysis	• Day 1: AI through DIEZ's own seven initiatives • Day 2: Recap and challenge: a plausible but unsupported output • Day 2: Lab B: Customer Care — Sentiment Analysis and Churn Prediction
Customer Churn Prediction	• Day 1: AI through DIEZ's own seven initiatives • Day 2: Lab B: Customer Care — Sentiment Analysis and Churn Prediction • Day 3: Sign-off simulation: Digital asks you to sign off this product
Content Moderation	• Day 1: AI through DIEZ's own seven initiatives • Day 3: Lab: Content Moderation
Partner IQ	• Day 1: AI through DIEZ's own seven initiatives • Day 2: Lab C: Document Intelligence and Partner IQ
Copilot	• Day 1: AI through DIEZ's own seven initiatives • Day 1: Safe use: approved tools, authorised data, what never to share • Day 1: Demonstration: from context to verified output • Day 3: Copilot control patterns It is also the approved environment for every lab.
Document Intelligence	• Day 1: AI through DIEZ's own seven initiatives • Day 2: Lab C: Document Intelligence and Partner IQ • Day 3: Sign-off simulation: Digital asks you to sign off this product

Appendix C. Simulated materials

All data is fictitious and DIEZ-style. It contains no real customer data and no financial values, and it is placed in the shared DIEZ OneDrive folder before Day 1. Arabic content is reviewed by Wellington's Arabic-speaking faculty.

Material	Content	Used in	Built-in issues to discover
Customer list	About 300 simulated companies across DAFZ, DSO and Dubai CommerCity: sector, size class, leases, tenure, services used, tier	• Day 2: Lab A: Customer Segmentation	Duplicates across zones, missing drivers, conflicting definitions, stale records
Customer tickets	About 200 simulated Arabic and English enquiries and complaints with model label and confidence	• Day 2: Recap and challenge: a plausible but unsupported output • Day 2: Lab B: Customer Care — Sentiment Analysis and Churn Prediction	Mixed language, sarcasm, low-confidence and mislabelled cases
Churn alert list	Simulated customers with lease history, ticket counts and churn probability	• Day 2: Lab B: Customer Care — Sentiment Analysis and Churn Prediction • Day 3: Sign-off simulation: Digital asks you to sign off this product	Missing history, a customer flagged by a data error, borderline probabilities
Community posts	Simulated text posts with moderation decisions, plus a policy excerpt	• Day 3: Lab: Content Moderation	False positives, false negatives, exception cases
Partner matches	Simulated recommendation list with company-profile fields	• Day 2: Lab C: Document Intelligence and Partner IQ	Ranking skew towards large members, incomplete profiles
Application forms	Simulated forms (PDF) and the extracted-fields table	• Day 2: Lab C: Document Intelligence and Partner IQ • Day 3: Sign-off simulation: Digital asks you to sign off this product	Misread fields, missing pages, mismatched names

Material	Content	Used in	Built-in issues to discover
Scenario pack	Scenario cards, policy document and enquiry, departmental definitions, release packs, mail set	• Day 1: Safe use: approved tools, authorised data, what never to share • Day 1: Demonstration: from context to verified output • Day 1: Lab: context and instruction on a stewardship task • Day 3: Sign-off simulation: Digital asks you to sign off this product • Day 3: Copilot control patterns	—

Appendix D. Assumptions

D.1 Data governance and AI governance

DIEZ's data-governance framework and AI-governance framework have not yet been shared with the faculty. DIEZ Digital confirmed on 25 September 2026 that DIEZ's data-governance team owns these frameworks and that the training must stay within them.

Until extracts are received, the sessions are built on the assumptions below:

- Each assumption is replaced by DIEZ's own wording and structure when the documents arrive.
- No external framework, standard or legal instrument is presented as DIEZ policy.
- Where DIEZ has no written policy on a point, the session treats it as an open question for the data owner and Digital to settle. Participants' artefacts (checklists, escalation maps, sign-off criteria) can be offered to DIEZ's governance team as input. The faculty does not write DIEZ policy.

#	Assumption	How the sessions use it until confirmed	Sessions	Requested from DIEZ
G1	Data roles. DIEZ distinguishes business data owners and stewards, technical custodians (Digital) and data users.	Exercises use the responsibilities, not titles; role names appear as placeholders to be replaced by DIEZ's terms.	D1.S1, D2.S2, D3.S2, D3.S6	Role definitions from the data-governance framework
G2	Data classification. DIEZ classifies data into levels that decide who may access it and whether it may be used with an AI assistant.	Illustrative levels (public, internal, confidential, restricted), marked on every slide as illustrative and not DIEZ's scheme.	D1.S3, D2.S2, D3.S5	Classification levels and their handling rules for AI use
G3	Data quality. DIEZ measures data quality along common dimensions.	Generic dimensions: completeness, accuracy, consistency, timeliness, validity, uniqueness.	D2.S2, D2.S3	DIEZ's data-quality dimensions, rules or indicators
G4	Approved AI tools. Only tools approved by DIEZ Digital may be used with DIEZ information. Microsoft 365 Copilot is approved (confirmed by DIEZ Digital on 25 September 2026).	It is the only AI tool used in labs. No other AI tool is demonstrated, compared or recommended.	All labs	List of approved tools and any conditions of use
G5	Acceptable use. DIEZ has, or is preparing, rules on what staff may put into an AI tool.	Sessions teach a decision method (Is it authorised? How is it classified? Is it necessary? Can the output be verified?) rather than quoting rules.	D1.S3, D3.S5	AI acceptable-use policy or guidance
G6	AI product approval. Digital builds and maintains AI products; the business owner signs off and then owns the product (DIEZ Digital, 25 September 2026). No written sign-off checklist has been shared.	The sign-off simulation uses a neutral checklist: purpose, data, testing, known limitations, human review, monitoring, escalation.	D3.S3, D3.S6, D4.S2	Any existing approval, release or risk-assessment procedure
G7	Human oversight and escalation. Escalation runs from the data steward to the business owner's leadership and to Digital.	Escalation maps use this route as a placeholder.	D3.S4, D3.S6	Escalation routes and decision rights
G8	Legal and regulatory references. UAE and Dubai instruments are referenced only where DIEZ confirms they apply. The programme does not give legal advice.	No legal instrument is taught as a rule.	D3.S2	Which instruments DIEZ wants referenced, if any

Timing: to finalise Day 3, the faculty needs the framework extracts at least two weeks before the first delivery day. If they arrive later, Day 3 runs on the placeholders above and is updated for subsequent deliveries.

D.2 Other planning assumptions

- Participants. Business section heads and team managers who own datasets, processes and products and sign off AI-enabled products. They are not technical. About 20 per cohort, working in teams formed by function across the three zones.
- Environment. DIEZ laptops with Microsoft 365 Copilot in Word, Excel, PowerPoint and Outlook. Course materials sit in a shared DIEZ OneDrive folder prepared before Day 1. There is no access to live DIEZ systems.

- Data. Simulated data only, with DIEZ-style naming as agreed with DIEZ Digital. No real customer data and no financial values. Screenshots or user-guide pages of the live initiatives are used where DIEZ provides them.
- Timing. Durations are net contact time. Start and end times and breaks are set with DIEZ HR and Wellington.
- Day 4. Sessions on management, adoption and CMI evidence are provided by CMI through Wellington. Softengi coaches the capstone and supplies scenario-based post-assessment items for O1–O6.
- Language. English delivery with Arabic-speaking co-facilitation by Wellington. The key terms listed in each brief feed the bilingual glossary.
- Approval. All content remains subject to Wellington's review and DIEZ's approval.
