WELLINGTON CAMPUS

DIEZ AI Literacy Programme 2026

AI for Data Stewards

Programme Summary

From Data Readiness to Responsible AI Application

Four-day applied capability programme for mid-level managers, business data owners, Data Stewards, operational managers and business use-case owners.

Designed, managed and delivered by Wellington Education

Specialist AI faculty | CMI accreditation and professional recognition pathway | WEL.X capability and measurement platform | Bilingual delivery capability

RFP DIEZ/PRAD/RFP/037-26 | PR 575036

Programme Overview

AI for Data Stewards is a practical four-day programme that connects organisational data, governance, business operations and AI-enabled decision-making. It is designed for professionals who understand their functions and data but are not expected to be AI engineers or data scientists. Participants with basic to moderate AI familiarity learn how to identify worthwhile uses of AI, evaluate data readiness, verify AI outputs, apply appropriate controls and translate opportunities into measurable business workflows.

The programme follows a clear capability journey: Understand, identify, apply, verify, govern, implement and measure. Its emphasis is enterprise application and responsible use, not product-specific technical training.

The four-day programme also incorporates a professional development and accreditation pathway aligned with the CMI Leading AI Implementation programme. This connects responsible AI knowledge with the managerial capability required to lead adoption, manage change and demonstrate operational impact.

Client Content Guidelines

The programme incorporates every area in the DIEZ Digital AI Literacy Programme Content Guidelines. Each principle shapes the teaching content, practical activities and participant evidence.

Guideline	Programme coverage
DIEZ Relevant	Cases and exercises use leasing, real estate pricing, government services, customer growth, compliance and operational processes.
Enterprise AI Focused	Participants examine how AI changes end-to-end processes, management decisions, controls and service outcomes, alongside individual productivity.
Build on DIEZ AI	The programme uses the seven current and live DIEZ AI initiatives as recurring case studies, exercises and capstone options.
Technology Aware Not Tool Led	Activities reflect the DIEZ technology landscape and approved environments without endorsing a commercial product or teaching tool-dependent methods.
Responsible AI	Governance, privacy, security, explainability, bias, human oversight, decision rights, evidence and escalation run through all four days.
Practical	Participants work with relatable scenarios, simulated data, imperfect outputs and case studies, producing workplace-ready artefacts each day.

DIEZ Digital AI Initiatives

The training covers all seven initiatives identified in the client guidelines. Participants consider the business purpose, required data, likely risks, human role, controls and measures of success for each initiative.

Initiative	Business application	Training coverage
Customer Segmentation	Groups customers by behaviour and profile to target engagement and services.	Data completeness and representation, segment validity, historical bias, business interpretation and appropriate use.
Sentiment Analysis	Reads customer feedback across channels to identify satisfaction trends.	Language and context, confidence, false interpretation, multilingual considerations, trend validation and manual review.
Customer Churn Prediction	Flags customers who may leave so teams can intervene.	Predictive data, probability rather than certainty, fairness, intervention rules, outcome tracking and human approval.
Content Moderation	Screens submitted content against compliance standards.	Policy translation, classification errors, confidence thresholds, sensitive content, exception handling and escalation.
Partner IQ	Matches businesses with suitable partners through AI-supported matchmaking.	Matching criteria, data quality, ranking bias, explainability, conflicts, human judgement and partnership outcomes.
Copilot	Supports daily work, drafting and information lookup.	Prompting, authorised data, confidentiality, source checking, output verification, accountability and appropriate task selection.
Document Intelligence	Extracts and structures document data to accelerate processing.	Extraction accuracy, missing information, confidence, validation, evidence retention, privacy and exception workflows.

Core Working Discipline

Participants develop a repeatable approach that remains useful as tools change:

CONTEXT → INSTRUCT → REVIEW → VERIFY → DECIDE → DOCUMENT → ACT OR ESCALATE

Exercises can be completed in DIEZ-approved AI environments using authorised, non-sensitive or simulated information, including Microsoft Copilot where appropriate.

Learning Outcomes

- Identify activities where AI can improve efficiency, consistency, insight or decision support, while recognising where direct human judgement is required.
- Provide suitable context and instructions, work iteratively with AI and improve generated outputs.
- Verify accuracy, identify unsupported statements and decide whether an output should be accepted, improved, rejected or escalated.
- Use AI appropriately for metadata drafting, data-quality investigation, classification, summarisation, governance documentation and stakeholder communication.
- Assess whether data is documented, governed, accessible and fit for an AI-enabled use case.
- Recognise privacy, confidentiality, hallucination, bias, security, intellectual-property and over-reliance risks.
- Define human review, decision rights, audit evidence, escalation, monitoring and success measures in AI-assisted workflows.
- Evaluate the purpose, data, risks, controls and success measures for all seven DIEZ digital AI initiatives.
- Apply AI to DIEZ-relevant scenarios involving leasing, real estate pricing, government services, customer growth, compliance and operations.
- Demonstrate management capability aligned with CMI Leading AI Implementation through the capstone, evidence portfolio and workplace application plan.

Pre-Programme Baseline

A 30-45 minute self-paced diagnostic assesses AI familiarity and usage, confidence, understanding of AI limitations, data-governance awareness, responsible-use awareness and confidence in evaluating AI-generated information. Each participant also identifies a recurring business, process or data activity that could benefit from AI. The diagnostic is not a pass/fail test; it enables facilitators to calibrate the delivery to the cohort.

Four-Day Learning Journey

Day	Focus	Key learning and application	Participant evidence
1	Understand and Identify	AI essentials, enterprise AI and decision-making, the Data Steward role, limitations and hallucinations, opportunity selection and the Copilot case. Participants compare productivity tasks with process-level AI opportunities.	DIEZ AI initiative map, AI Opportunity Map and tested working pattern
2	Apply to DIEZ Initiatives	Data readiness, problem framing and feasibility. Applied labs cover Customer Segmentation, Sentiment Analysis, Customer Churn Prediction, Partner IQ and Document Intelligence using relevant business scenarios.	AI and Data Readiness Checklist, reviewed stewardship artefacts and prioritised DIEZ use case
3	Verify and Govern	Responsible AI across all initiatives, with focused Content Moderation and Copilot cases. Participants address hallucination, bias, privacy, security, explainability, human review, decision rights and escalation.	AI Safe Use Checklist, initiative risk review, human review workflow and escalation map
4	Implement and Demonstrate	Workflow integration, adoption, change and measurement. Each capstone applies one of the seven initiatives to leasing, real estate pricing, government services, customer growth, compliance or operations. CMI-aligned leadership and implementation evidence is completed.	Governed AI-assisted workflow, capstone assessment, post-assessment, CMI evidence portfolio and 30-day application plan

Applied Learning Method

Every day combines essential theory, discussion, demonstration, hands-on practice, challenge and evidence. Participants produce usable artefacts throughout the programme rather than waiting for a final workshop. The learning cycle is:

LEARN → SEE → TRY → CHALLENGE → IMPROVE → EVIDENCE

Capstone and Responsible Workflow Design

On Day 4, participants develop a governed AI-assisted workflow covering the business problem, AI opportunity, required data, data readiness, risks, human oversight, governance controls, implementation approach, expected value and measurement. The operating model is:

INPUT → AI ASSISTANCE → HUMAN REVIEW → DECISION → EVIDENCE → ACTION → MONITORING

CMI Accreditation and Professional Recognition

Wellington proposes an integrated accreditation and professional recognition pathway aligned with the CMI Leading AI Implementation programme. The CMI component runs through the four-day learning journey rather than operating as a separate course. It connects the technical, data and governance content with the management capability needed to introduce AI responsibly within teams and operational processes.

The CMI-aligned content covers AI-enabled operational improvement, translating an AI opportunity into an implementation plan, leading teams through change, responsible managerial decision-making, adoption, team capability and the demonstration of operational impact.

Participants build evidence through practical activities, the governed AI workflow, the capstone assessment and the individual 30-day application plan. Subject to final CMI programme mapping and approval, participant registration, successful completion of the required assessment evidence and applicable eligibility

requirements, this provides access to the relevant CMI accreditation, certification or professional recognition pathway.

Delivery Support

Arabic-speaking subject-matter capability can support explanations, terminology, exercises, scenarios, discussions, risk concepts, capstone work and participant questions. This is bilingual facilitation within one consistent programme standard, not a separate course or translation-only role.

WEL.X Capability and Measurement Layer

Subject to agreed configuration and access permissions, WEL.X supports onboarding, baseline and post-assessment, learning resources, progress and completion tracking, action planning, engagement, cohort-level capability insights, feedback and consolidated reporting. The aim is to measure capability development and workplace application, not attendance alone.

Assessment and Evidence

Stage	Evidence
Before	Baseline diagnostic, confidence assessment and proposed business or data opportunity.
During	Practical exercises, facilitator observation, pulse checks, peer review, daily artefacts and scenario challenges.
Final	Scenario-based post-assessment, capstone review, governed workflow, CMI-aligned evidence portfolio and individual 30-day action plan.

Participant Toolkit

Each participant receives reusable resources: a workbook, AI working and prompt canvas, output verification checklist, data readiness checklist, safe-use decision guide, AI risk review template, human-oversight template, decision and escalation framework, stewardship scenario pack, capstone template, CMI evidence guide and 30-day application plan.

Delivery Capacity and Facilities

- Delivery can take place over four consecutive full days or two two-day blocks within two weeks, depending on DIEZ operational requirements.
- Subject to scheduling and faculty confirmation, Wellington can support two parallel cohorts with dedicated facilitation, a consistent curriculum, standardised assessment and comparable outcomes.
- Wellington can provide suitable training premises, subject to scheduling, cohort needs and DIEZ approval, or deliver at a DIEZ-designated facility.

Programme Management and Accountability

Wellington Education remains the programme owner and single point of accountability to DIEZ. Before delivery, it coordinates onboarding, faculty, baseline assessment, materials, scenarios, venue, logistics and technology readiness. During delivery, it manages faculty, bilingual support, labs, assessments, participant support and quality. After delivery, it consolidates post-assessment, capstone evidence, action plans, feedback, capability progression, cohort reporting and improvement recommendations.

Overall Programme Value

The programme equips the people at the centre of enterprise AI adoption to connect business need, data readiness, responsible AI practice and operational implementation. Participants do not need to become AI engineers. They need sufficient AI understanding to use it, data understanding to question it, governance knowledge to control it and business judgement to implement it responsibly. The CMI pathway adds recognised management development and provides a structured route to evidence their ability to lead responsible AI implementation.

UNDERSTAND → APPLY → VERIFY → GOVERN → IMPLEMENT → MEASURE
